CHARACTERISTICS

MIG-BRONZE-SI is silicon bronze welding wire to be used in MIG (GMAW) welding process.

APPLICATIONS

For welded joints and surfacing welds on copper-zinc alloys and on low alloy cuprous metals. Also used to weld base metals of steel and cast iron to copper, brass, and bronze. Maybe used to weld on galvanized steel. When making joints in silicon bronze, the low thermal conductivity must be taken into consideration. Preheating of the parent metal (silicon bronze) is not usually necessary.

CHEMICAL COMPOSITION OF WELD METAL(%)

Cu	Si	Mn	Sn	Fe	Zn
